Computers on wheels incident UHNM

I want to bring to you attention an incident that has taken place at UHNM hospital recently. This is the 2nd Incident that has occurred in the past 2 years so I thought it would be best to inform yourself so that you may bring this to the attention of other organisations that are currently using the same Parity Computer on wheels. I have added an attachment and photos of the issues that occurred. Currently our I.T department is gaining further information. Once investigation have been completed,
I will update you on any new developments.

For Fun- Fire Safety Quiz

Toaster Quiz

True or False

1

It's ok to put Tea Cakes in a toaster that's been toasting bread without checking the timer and then walk out of the kitchen and leave the Toaster unattended?

Answer – False – always check the setting and never leave a toaster that's in use.

2

You can cook fish fingers in a toaster?

Answer – False – only use toasters for sliced bread or bagels (if toaster has bagel setting)

3

Can you cook your toast in the toaster in your office and when it sets off the fire alarm ignore the Continuous alarm and continue sitting down and eating your toast?

Answer - False in every way - Toasters should only be used in designated kitchens, because kitchens are fitted with Heat Detectors that don't react to burnt toast.

A Continuous fire alarm in an Office environment means you should evacuate to a place of safety immediately. You should know your rendezvous point.
Wards use Phased Horizontal Evacuation (PHE) and are trained to move patients in a safe and controlled manner to a 'Place of Relative Safety' in a fire situation.

These are real examples of what has happen in our Trusts this Year!!!!!!
